So FIRESCAPE Mendocino has two tools I believe are useful in keeping the collaborative focused as we move forward and guide our decisions. The first is the attached situation diagram. It was developed over several workshops with lots of stakeholder input. It identifies common values (along the right side in green) and threats to those values. Also identified possible solutions to those threats, I think the threat is in brown and possible solution in yellow. The second is the focal areas. This was developed by the core team that consists of several stakeholders/interest groups and keeps us focused on where we would pursue work. I’ve attached these to the email. Hope these are helpful.
